

Kitchen Story
Simplilearn Project For Frontend Developent
https://github.com/mha77/Phase4_KitchenStory

Backend:
Java 11
SpringBoot
MariaDB
Hibernate
JDBA

Frontend:
HTML
JavaScript
Jquery
Bootstrap
JS Datatable

With the application is possible to add and delete Products in th AdminPage.
The User Page can add these products to a cart

Since JS Datatable was so time consuming, I couldn't fullfill all requirements. My extension time exceeded and i have to commit. What I totally forgot was to change the password of the admin.
Else it doesn't calculate the total price of the cart and send order confirmation.
I hope it's ok and I can do it in the Capstone Project. I need professional help for some problems.
With some solutions I'm not so happy
